How should I transport my cake back?

Caring For Your Cake · https://kuke.my/faqs/how-should-i-transport-my-cake-back/

The best way to transport a cake is in the back of a SUV/hatchback which has a flat surface and access to air conditioning. Alternatively, it is possible to transport your cake on the floorboard of your car - we cling wrap all our boxes to keep your cakes from becoming contaminated. Your final resort is to place the cake on the car seat, however for this to work well you will need to place something on the seat to make it level (many people use their umbrella). This will ensure your cake doesn’t tilt and accidentally lean on the inside of the cake box.

Please note that in Malaysian weather, the cakes will not be able to withstand our temperature unless the air conditioning is turned on. When driving please be careful to keep the vehicle level at all times, especially when turning corners or going over bumps.
